Thesis Title	Benign cystic lesions of the jaws prospective and retrospective clinicopathological study .		
Year	1990		
Abstract	<p>The relative incidence and other clinical features of cysts of the jaws treated at oral & maxillofacial surgery department was studied (315 patients ,217 male ,134 female) with different types . 87.7 % of cysts were odontogenic , 7.1% were non-odontogenic ,and 5.1% of patient have multiple cystic lesions . 60% were periodontal cysts ,greater incidence in male (3:2) in second and third decade ,60% were in the maxilla .</p> <p>Enucleation and primary closure of large cystic lesions found to be a satisfactory method, provided that optimal primary closure is performed irrespective of the size and location of the lesion .</p> <p>Diagnosis on clinical and radiographic criteria seems not reliable and histological examination is necessary .</p>
