Thesis Title	An evaluation of different cavity designs for class II amalgam restoration .		
Year	1991		
Abstract	<p>The study of the master degree thesis evaluated the effect of modification of class II cavity design on the fracture strength of the remaining tooth structure .</p> <p>The study was conducted on 50 extracted sound human upper premolars. In this study we use especially designed testing part with ovoid shape head 3.9 mm in diameter connected to a universal testing machine .</p> <p>The results reveal that there are no statistical differences in fracture load between the sound teeth and the teeth prepared with class II ultra conservative cavity preparation.</p>
