Thesis Title	<b>Adherence of Mutans Streptococci On The Teeth Surfaces: Microbilogical And Biochemical Studies</b>		
Year	<b>1998</b>		
Abstract	<p>Biotype I, IV and V of Mutans Streptococci were dominant in the mouth of 202 students (ages 21-23). significant differences were obtained between oral streptococci and Mutans Streptococci and the DMFS and DS were significantly to P.I. the amount of total protins in saliva were negatively correlated with DMFS and MS numbers in dental plaque. Anew model was invented based on the principle of agar diffusion to study the adsorption of chlorhexidine on the teeth surfaces</p>
